Miracle Agbebaku

Full-stack engineer: React, TypeScript and edge backends

miracleagbebaku122@gmail.com · WhatsApp +234 902 163 7905 · miracle-agbebaku-portfolio.vercel.app

SUMMARY

Full-stack engineer who builds both sides: React and Next.js interfaces fed by streamed backend events, a modular JavaScript app with 25 interchangeable UI shells, and the APIs, realtime services and data layers behind them. Works in TypeScript and Python and tests across phone, tablet and desktop sizes.

PROJECTS

Lagoon

In development

JavaScript, Cloudflare Workers, Durable Objects, WebSockets, Playwright

Social platform with a modular JavaScript frontend and a Cloudflare edge backend.

- Built a registry-based frontend where features register tabs, screens, settings and actions, with 25 interchangeable UI shells that change layout, navigation, type, density and motion without rewriting features.
- Connected it to live messaging over WebSockets, with client-side encryption for one-to-one chats.
- Tests with browser suites at phone, tablet and desktop sizes, collecting page and console errors and checking overflow and contrast.

NEXUS CORE

Working prototype

Next.js, React, TypeScript, FastAPI, Pydantic, SQLite

Next.js and React Command Center for a governed agent pipeline.

- Built the interface where users submit tasks and watch each pipeline stage and governance decision arrive over Server-Sent Events.
- Added conversation and project management, message editing and regeneration, an audit viewer with chain status, and full-text message search.
- Backed by a FastAPI and SQLite service, with model output validated by Pydantic before it becomes a plan.

ELLA

Active development

TypeScript, Node.js, Express, Supabase, React, Vite

WhatsApp assistant with a web dashboard and a React workspace.

- Built an account dashboard in plain HTML and JavaScript for signup, linking by QR code or pairing code, and per-account settings.
- Added a React and Vite workspace for research, scraping and agent tools on the same account system.
- Backed by a TypeScript and Express service with Supabase persistence and about 50 test scripts.

SKILLS

Languages	Python, TypeScript, JavaScript, HTML5, CSS
Frontend	React, Next.js, Vite, Tailwind CSS, Three.js
Backend and APIs	FastAPI, Node.js, Express, Pydantic, Zod
Realtime and edge	Cloudflare Workers, Durable Objects, WebSockets, Server-sent events
Data and auth	PostgreSQL, SQLite, Supabase, Clerk
Testing and delivery	Playwright, Vitest, GitHub Actions, Git, Vercel, Render
Practices	responsive testing, contrast checks, input validation, automated testing

WRITING

20 engineering notes on trust boundaries, AI agent pipelines, messaging systems and how the portfolio is built, at miracle-agbebaku-portfolio.vercel.app/engineering.
